Compatible Software for Specification Editing

These prices are for software only. See pricing for either CMS or NMS for Specifications to populate the software

SpecMacros©

SpecMacros© macros are intended to function with all of Spex.ca's master specification document products. In combination, these tools will assist specifiers to develop and prepare project specifications effectively and efficiently. SpecMacros© macros are "mini" programs and are written in the programming language indigenous to the word processing software being used (WordPerfect for Windows or MS Word). They quickly execute a series of keystrokes to achieve some desired function but at >>fast-as-light>> computer speed. (works with all master specifications offered by Spex.ca)

SpecMacros are licensed on an annual, per-user (computer) basis. Subscription renewal price is 40% of the list price. Contact Spex.ca for pricing on multi-user licenses.

	New	Update ‡
MS Word (English and French) or WordPerfect (English only)	\$245	\$96

BIMdrive ©

This first edition of BIMdrive is stand-alone software which uses the Canadian Master Specification (CMS) as its text base. BIMdrive assists design consultants and specifiers to streamline the specification preparation process by greatly reducing the dependency on the 'editing' skills of users, and instead focuses on tapping the user's knowledge of the construction materials being specified. Materials and their characteristics are specified in BIMdrive through a simple checkbox interface; the relevant clauses in the specification text is modified automatically. BIMdrive includes an editor to enable full control of the text, as required by the project.

BIMdrive is licensed on an annual, per-user (computer) basis. Subscription renewal price is 40% of the list price. Contact Spex.ca for pricing on multi-user licenses.
